This book on mechanical microsensors is based on a course organized by the Swiss Foundation for Research in Microtechnology (FSRM) in Neuchatel, Switzerland, and developed and taught by the authors. Support by FSRM is herewith gratefully acknowledged. This book attempts to serve two purposes. First it gives an overview on mechanical microsensors (sensors for pressure, force, acceleration, angular rate and fluid flow, realized by silicon micromachining). Second, it serves as a textbook for engineers to give them a comprehensive introduction on the basic design issues of these sensors. Engineers active in sensor design are usually educated either in electrical engineering or mechanical engineering. These classical educational programs do not prepare the engineer for the challenging task of sensor design since sensors are instruments typically bridging the disciplines: one needs a rather deep understanding of both mechanics and electronics. Accordingly, the book contains discussion of the basic engineering sciences relevant to mechanical sensors, hopefully in a way that it is accessible for all colours of engineers. Engineering students in their 3 or 4 year should have enough knowledge to be able to follow the arguments presented in this book. In this sense, this book should be useful as textbook for students in courses on mechanical microsensors (as is currently being done at the University of Twente).

From reader reviews:

Jonathan Scott:

Within other case, little persons like to read book Mechanical Microsensors (Microtechnology and MEMS). You can choose the best book if you like reading a book. Provided that we know about how is important some sort of book Mechanical Microsensors (Microtechnology and MEMS). You can add understanding and of course you can around the world by just a book. Absolutely right, because from book you can know everything! From your country until finally foreign or abroad you may be known. About simple matter until wonderful thing you could know that. In this era, we are able to open a book as well as searching by internet device. It is called e-book. You should use it when you feel weary to go to the library. Let's study.

Jean Ashburn:

Book is written, printed, or created for everything. You can recognize everything you want by a reserve. Book has a different type. As it is known to us that book is important point to bring us around the world. Beside that you can your reading skill was fluently. A guide Mechanical Microsensors (Microtechnology and MEMS) will make you to end up being smarter. You can feel far more confidence if you can know about everything. But some of you think this open or reading any book make you bored. It isn't make you fun. Why they can be thought like that? Have you searching for best book or acceptable book with you?

Jessica Keith:

What do you ponder on book? It is just for students since they're still students or it for all people in the world, what the best subject for that? Just simply you can be answered for that question above. Every person has several personality and hobby for every single other. Don't to be forced someone or something that they don't desire do that. You must know how great and also important the book Mechanical Microsensors (Microtechnology and MEMS). All type of book is it possible to see on many resources. You can look for the internet resources or other social media.

Yong Dickerson:

Why? Because this Mechanical Microsensors (Microtechnology and MEMS) is an unordinary book that the inside of the reserve waiting for you to snap the idea but latter it will zap you with the secret it inside. Reading this book beside it was fantastic author who else write the book in such awesome way makes the content inside of easier to understand, entertaining technique but still convey the meaning fully. So , it is good for you for not hesitating having this nowadays or you going to regret it. This book will give you a lot of rewards than the other book have got such as help improving your proficiency and your critical thinking means. So , still want to delay having that book? If I have been you I will go to the book store hurriedly.
