Tectonics of the Western Mediterranean and North Africa (Special Publication) (No. 262) G. Moratti, A. Chalouan, Editors

This book provides an updated insight into the overall tectonic evolution of the Western Mediterranean region and North Africa. The tectonic setting of the region reflects a long-lived and complex evolution, mainly related to the Alpine Orogeny. This inheritance is expressed by an intricate pattern of arc-shaped mountain chains, the Alps, the Betic-Rif Cordilleras and the Apennine-Maghrebian belt, whose southern branches mark the present limit between the African and Eurasian plates. The volume covers the Maghrebian chains in North Africa, from Tunisia to Morocco and the Western and Central Mediterranean, from Spain to Italy from the pre-orogenic phases (Palaeozoic-Mesozoic) to the post-collisional neotectonic and Quaternary development. It includes both original research papers and syntheses dealing with the aspects of structural, sedimentary, metamorphic, marine geology.

Also available:

Tectonic Development of the Eastern Mediterranean Region - ISBN 186239198X

The Mediterranean Basins: Tertiary Extension Within the Alpine Orogen - ISBN 1862390339
