Adaptive Regression for Modeling Nonlinear Relationships (Statistics for Biology and Health) George J. Knafel, Kai Ding

This book presents methods for investigating whether relationships are linear or nonlinear and for adaptively fitting appropriate models when they are nonlinear. Data analysts will learn how to incorporate nonlinearity in one or more predictor variables into regression models for different types of outcome variables. Such nonlinear dependence is often not considered in applied research, yet nonlinear relationships are common and so need to be addressed. A standard linear analysis can produce misleading conclusions, while a nonlinear analysis can provide novel insights into data, not otherwise possible.

A variety of examples of the benefits of modeling nonlinear relationships are presented throughout the book. Methods are covered using what are called fractional polynomials based on real-valued power transformations of primary predictor variables combined with model selection based on likelihood cross-validation. The book covers how to formulate and conduct such adaptive fractional polynomial modeling in the standard, logistic, and Poisson regression contexts with continuous, discrete, and counts outcomes, respectively, either univariate or multivariate. The book also provides a comparison of adaptive modeling to generalized additive modeling (GAM) and multiple adaptive regression splines (MARS) for univariate outcomes.

The authors have created customized SAS macros for use in conducting adaptive regression modeling. These macros and code for conducting the analyses discussed in the book are available through the first author's website and online via the book's Springer website. Detailed descriptions of how to use these macros and interpret their output appear throughout the book. These methods can be implemented using other programs.

From reader reviews:

Charles Lee:

In this 21st centuries, people become competitive in most way. By being competitive now, people have do something to make these individuals survives, being in the middle of typically the crowded place and notice by simply surrounding. One thing that often many people have underestimated that for a while is reading. Yep, by reading a reserve your ability to survive boost then having chance to endure than other is high. For you who want to start reading some sort of book, we give you this specific Adaptive Regression for Modeling Nonlinear Relationships (Statistics for Biology and Health) book as beginning and daily reading publication. Why, because this book is more than just a book.

James Jones:

The event that you get from Adaptive Regression for Modeling Nonlinear Relationships (Statistics for Biology and Health) may be the more deep you excavating the information that hide inside the words the more you get considering reading it. It does not mean that this book is hard to know but Adaptive Regression for Modeling Nonlinear Relationships (Statistics for Biology and Health) giving you enjoyment feeling of reading. The article writer conveys their point in specific way that can be understood simply by anyone who read the item because the author of this reserve is well-known enough. That book also makes your own vocabulary increase well. Making it easy to understand then can go along, both in printed or e-book style are available. We advise you for having this kind of Adaptive Regression for Modeling Nonlinear Relationships (Statistics for Biology and Health) instantly.

Joshua Matthews:

Reading can called mind hangout, why? Because when you find yourself reading a book specifically book entitled Adaptive Regression for Modeling Nonlinear Relationships (Statistics for Biology and Health) your brain will drift away trough every dimension, wandering in every single aspect that maybe not known for but surely might be your mind friends. Imaging each and every word written in a book then become one web form conclusion and explanation that will maybe you never get prior to. The Adaptive Regression for Modeling Nonlinear Relationships (Statistics for Biology and Health) giving you another experience more than blown away your mind but also giving you useful facts for your better life on this era. So now let us demonstrate the relaxing pattern this is your body and mind will likely be pleased when you are finished reading through it, like winning a. Do you want to try this extraordinary wasting spare time activity?

Anthony Koch:

This Adaptive Regression for Modeling Nonlinear Relationships (Statistics for Biology and Health) is great book for you because the content and that is full of information for you who have always deal with world and possess to make decision every minute. This particular book reveal it info accurately using great manage word or we can declare no rambling sentences included. So if you are read that hurriedly you can have whole

facts in it. Doesn't mean it only provides straight forward sentences but challenging core information with attractive delivering sentences. Having Adaptive Regression for Modeling Nonlinear Relationships (Statistics for Biology and Health) in your hand like getting the world in your arm, data in it is not ridiculous 1. We can say that no book that offer you world throughout ten or fifteen small right but this e-book already do that. So , it is good reading book. Hey there Mr. and Mrs. occupied do you still doubt that will?
