Major floods are the most chronic and costly natural hazards in many countries. The contributors to this volume, experts in current flood research, were invited to speak at the 2006 Kovacs Colloquium organized by the International Hydrological Programme (IHP) of UNESCO and IAHS. This book presents their papers and new information and insights into key issues of flood research. Scientific understanding of the flood phenomenon and of its potential impacts from the perspective of the engineering, operational, economic, social and ecological aspects of flood research, and with a focus on integrated flood risk management, is provided.

The International Association of Hydrological Sciences is the world's premier member-based organization promoting the study and practice of Hydrology. Our books are authored, edited and produced at the highest level of quality, with the most current and thorough research.

Our publications and our work advance the science and the professional practice of Hydrology in a variety of Science and Engineering fields around the world.

The areas that we publish in include:

- Ground water
- Surface water
- Snow and ice hydrology
- Drought and desertification
- Runoff modelling
- Watershed
- Remote sensing
- Water quality
- Water resources and management
- Ecohydrology/hydro-ecology
- Erosion and sediment
- Tracer hydrology
