Starting Science From God: Rational Scientific Theories from Theism Ian J Thompson

Many of us these days sense there is something real beyond the scope of naturalistic science. But what? Must mental and religious lives always remain a mystery and never become part of scientific knowledge? In this well-argued book, physicist Ian Thompson makes a case for a 'scientific theism'. He shows how a following of core postulates of theism leads to novel and useful predictions about the psychology of minds and the physics of materials which should appear in the universe. These predictions constitute a kind of 'theistic science'. It meshes surprisingly well with the structure of reality already revealed by modern quantum field theory and by theories of developmental stages in human minds. The result is a serious look at a promising new rational structure encompassing theology, psychology and physics. For more details see www.beginningtheisticscience.com
